Subject.....American transport arriving for the Desert, ✓

"America delivers the goods" - and here is just a little of the motor transport alone which is now regularly arriving in huge quantities for use in the Middle East. The partly assembled vehicles arrive in wooden crates which are speedily unloaded from the ships on to lighters and taken to the quay where the unpacking and final assembly takes place in a very short time, and the increasing conveyors that are now rumbling over the desert roads.

Shots show:-

The crates of M.T. being loaded from the ships on to lighters.

The crates being brought to the quay - ditto being unpacked.

Partly assembled motors in crates.

Cranes lifting vehicles while wheels are put on eye ...

Various stages in final assembly.

Rows and rows of completed vehicles ready to move off in convey,

Vehicles moving off - various shots.

(Unloading spare tyres and stacking same for removal to various depots - another sign of efficiency safeguarding against idle transport through lack of spares) ... and there will be no excuse for running out of petrol on the road either for here are some of the thousands of spare petrol tins for the Transport.

Part of a convey on route for the desert (this shot is not very good)
