

## HOME-MADE CAR

Buses will have to mind their P.s and Q.s if the latest bid for the midget car stakes passes the post of mass-production. Weighing only three-and-a-half hundred-weights it was built by Mr. Ralph Arthur of Kingston, not as a stunt but as a car nearly everybody could afford. A kick-starter sets the three-and-a-half air-cooled engine in motion, a little power unit doing seventy-five miles to the gallon. Manufactured in large numbers the car could be sold for sixty pounds. It will do an easy forty-five miles an hour, has a four-speed gearbox, tackles any hills, and has surprising acceleration. There's no reason why nearly everybody couldn't afford one, if they give up smoking.
