

UNSINKABLE LIFEBOAT

There it is; thrown overboard <sup>yet</sup> and doesn't sink! Well, it was only a model, <sup>&</sup> Harold Gaskin has invented the unsinkable lifeboat and demonstrated the model of it at Hove. It can go right under and <sup>even come up,</sup> then ~~float full of water,~~ <sup>it c</sup> and <sup>f</sup> be launched overboard when a sinking ship has too much

30 list to use davits. If it surfaces bottom-up it floats that ~~way~~ <sup>Hence f double sealing.</sup> way too. <sup>f</sup> Either way the floor of the boat is higher than water-level, so gravity-operated valves empty the water out but let no more in. It must come to the surface, and it can't sink.

40 That the Board of Trade will take it up and the ~~ship~~ <sup>creation</sup> boat <sup>f</sup> be in standard use all the world over is the confident hope of inventor Harold Gaskin.
