

U.S. ARMY USES TV CAMERAS

Bound for the forward observation-post the modern soldier carries a television camera. The set that receives the pictures stays behind. The camera weighs eight pounds; the transmitter they also carry weighs 47. The U.S. Signal Corps tried them out at Fort Monmouth, New Jersey. Carrying the equipment was easy, even over rough ground. By walkie-talkie they warned the receiver-crew they were about to shoot.

The receiver was tuned in and the picture ~~received~~ <sup>came</sup>.

*T system I keep a C.O. keep*  
~~When the system is disrupted it should give the C.O.~~

completely in the battle-line picture. He won't depend on signals and messages, capable of being misunderstood and possibly out of date when received. But it does look as though war were becoming so complicated that only men with a science degree ~~could possibly be soldiers.~~

*c 73 soldiers*
