AIRSHIP.

A picture of an airship always raises the question --are they reasonably safe for travel? Here at Lakehurst Naval
Station, New Jersey, is an ald Reppelin. Its flying days are
over, but it is now used as a training ship for Uncle Sam(s
airship-minded nephews. Nevertheless, with the huge rabbs
range of the modern flying boat it is difficult to see the
advantage of the airship.

FLYING BOAT.

America has built the biggest flying boat in the world --made to the order of Soviet Russia. Thirty-one tons, with
a wing spread of 157 feet. As she rolled down the slipway she
s tuck, but was floated without damage. She is capable of carryi
fifty-six passengers and may be used for flights to the North
Pole. But you wonder if even in Russia there are fifty-six peopl
who want to go to the North Pole.

AEROBATICS.

Now for an air story in lighter mood --- Lieutenant J. Mackey shows off the latest thing in aerobatics. This is his way of spending a trans pleasant afternoon --- loops and dives and darts. He can keep his loops and dives --- we'll just have take darts.
