

BOAT AND CAR RACING.

558

Here are the lafs of a school in Carolina who have something new in sports. --- a circular rowing machine. It's very handy for schools and colleges where the only available water is a duck-pond. And it fosters the team spirit, you know, because no one can possibly win.

The idea spreads to car-racing --- this is in California ; Midget cars are racing in circles, travelling at enormous speeds. It makes you dizzy to look, but it 's safe ~~because they can't~~ *unless they* overtake. I f they do the strings get together ~~and initiate~~ *+ do something*
~~a dash~~

But let's open out on the grand scale. Still midget cars, and still running in circles --- but they're real live drivers at the wheel and they're gambling with real life. Six laps to the mile ^{turns} ---- a thousand ~~laps~~ *turns* in 50 minutes and a hundred crack-ups. ~~Here comes another one~~ *watch the back car* dodging death. And another!
