

MECHANIZED MIGHT FROM AMERICA.

This is one of the big aircraft factories in America, one engaged in making bombers for the R.A.F. Air Marshal Bishop V.C. is on a visit of inspection - the famous ^{ace} pilot of the last war is as ^{grand} ~~good~~ an encouragement to American workers as anybody could devise. It's good to see America's industry getting into it's stride to help us.

And here's a new American tank; the first delivered by a famous motor car firm of Detroit. It's another step forward in democracy's bid for mechanical supremacy. A twenty-eight tonner - the armament includes a seventy-five millimeter cannon.
