PLOUGHING DEMONSTRATION IN NORTHUMBERLAND.

~~Northumberland~~ Near Cambo in the North Country, young farmers receive lessons in ploughing. Every ridge of earth turned over should be perfectly level, illustrated by a walking stick placed across the furrows. ~~In this case, the plough blades have not been set correctly.~~

~~Members~~ Members of the young farmer's clubs of ~~Northumberland~~ Northumberland attend these useful demonstrations, and many an old hand turns up too -- just to get a few tips.

4 The machines they use are the General Service Ploughs which will turn up almost every type of land.

And so these young men of the fields learn their job to perfection -- keeping the furrow as straight as a die, as the blades cut the yielding soil backwards and forwards in a long straight line of billowing waves.
