Arctic Circle-- Opening up new Sea Route-

Sept 10th. '54.

North America--- History is made by a joint American-Canadian Expedition, as powerful ice-breakers slash their way through floes- ten feet thick- the ice-locked home of the walrus.

For the first time, a path has been cut through McClure Strait- the western entrance to the N.W. Passage, in the Canadian Arctic.

This isolated outpost was named after Capt Robert McClure, who penetrated ~~halfway~~ half-way through the strait in 1853.

The primary object of the mission is to chart and sound the Arctic seas, and even here amid the frozen wastes, the scientists find human society- Eskimo dogs, with their ~~part~~ owners, who have wandered from the mainland- strange crossing of the ways- on the roof of the world, *from which*

~~the experts bring home valuable information~~ the experts bring home valuable information about the fabulous North-West Passage
