U.N. Council

New York: The hopes of eighteen countries in gaining admittance to the United Nations were dashed - when Nationalist China vetoed the election of Outer Mongolia. Russia promptly retaliated by declaring against thirteen Nations of the Free World.

Nex t day, a dramatic new Russian proposal led to the election of all the countries except Japan and Outer Mongolia. So, the United Nations' family grows to seventy-six - with its first new members for five years.

Meanwhile, the U.S. Navy unveils a new line in submarines - the "Albacor"...

A shorter and more rounded version of an undersea craft the controlled

ARXMARKATAREAN in much the same way as an aircraft.

Although appreciably smaller than normal vessels, the hull affords more living-space for the crew.

Designed, Primarily, as a "floating test-bed," the "Albacor" embodies all the latest submarine developments. The "under-water guinea-pig" for the atom-fleet of the future.

Hertfordshire: Comet test

Hertfordshire: With the Comet Three circling the globe in triumph, its predecessor, the Mark Two, is being tested, to prove its reinforced fuselage - in a newly-completed "water tank" at Hatfield.

The water-tank test was first used on the ill-fated Comet One at Farnborough. And now, the Mark Two (soon to join R.A.F. Transport Command undergoes, in four minutes - the stresses encountered in a three hour flight.

Back to America - where stresses encountered by pilots, (when baling out at supersonic speeds) the subject of new tests.

That was a dummy pilot, by the way, mounted on a rocket-sled - and now speeding at over seven hundred miles per hour.

Filmed by ultra-slow-motion cameras, the dummy is ejected, while delecate instruments record the terrific fauxeexx forces encountered - for air-safety research
