Boat and SaucerPlane-

Aug 28th. '56.

Germany-- From Hamburg comes an ingenious new invention- a/boat with <sup>3</sup> legs; <sup>ON EACH IS A</sup> propellor that <sup>HELPS TO</sup> raise a speed <sup>HIGH</sup> of over 30 m.p.h. <sup>AT REACHING</sup> a certain <sup>RATE OF KNOTS,</sup> <sup>THE HULL</sup> rises from the water and only the wings are in contact with the surface.

At the end of a run, she settles down again, <sup>ON THE WATER</sup> ~~in the water~~ <sup>SO DOES THE SKIPPER!</sup> →

And here's a new look for a plane- the American Navy's strange aircraft with radar attachment. The bonnet- measuring 30 ft across, carries the largest and <sup>LONGEST-RANGE RADAR EVER BLOWN.</sup> ~~longest-range radar ever flown.~~

Though perhaps a bit ungainly, the "Flying-Saucer" Plane provides an all-seeing eye against any <sup>SURPRISE</sup> ~~surprise~~ attack.
