A HOME OF THE FUTURE.

Britain's first factory made show house; prototype of the half million promised by Mr. Churchill as emergency dwellings for disabled servicemen and their families. Bright idea number one is the living room fireplace which also provides heated air for two bedrooms. This house of the future has no stairs, no dust collecting window-sitting and is intended to last about 10 years. Plenty of built-in cupboards are a welcomed feature. Married women on the Staff of the Ministry of Works helped in the design. The kitchen is compact, but the initial blue print didn't provide sufficient facilities for washing clothes. They're going to fix a small copper now in the Bathroom. The refrigerator tops the list of the £80 worth of internal fittings built into Churchill Villa.

A hinged breakfast table is a space saving idea. This show house can be seen in Millbank near the Tate Gallery, London. Tickets of admission obtainable from your local authority. Bedroom number two also has plenty of cupboards and, like ~~the other rooms~~ the other rooms, is central heated. Housewives will want to know where to hang the washing in wet weather and may criticise the width of the hall; but here's one opinion.
