NEWS FROM U.S.A.

Something new on the road. Inventor Charles Vla-Kes demonstrates his Phibian car. It has no clutch, no differential and burns no fuel. This tank holds castor oil, which is fed through pipes to tiny rotary turbine motors, built into each of the car's four wheels. Propulsion is by hydraulic pressure. America's new no-petrol car brings the dream of every motorist a little nearer. But from wishful thinking to hard reality is no far step in Texas when farmer Gamble calls "Hey, George!" in his backyard, the geese take up the call and glide in from every direction. This farm is a refuelling centre for the birds on their annual migration. And George Gamble is America's unofficial "Keeper of the Geese." He never goes short of a Christmas dinner, for he has trained the geese so well that one of them always wants to stay with the kind Texas farmer.

KEEPER OF THE GEESE

Youngson Donaldson

X When farmer Gambill stands in his backyard and calls "Hey, George," the wild geese take up the call and glide in from every direction. For twenty-seven years, his Paris, Texas farm has been a refuelling stop-over for the birds on their annual migration - and Gambill has been America's self-appointed "Keeper of the Geese." At first he fed them at his own expense, then the job got so big that he had to enlist federal aid. Now the U.S. government sends him grain by the car-load. Ordinarily it's nearly impossible to get close to wild geese - but they swarm all over Gambill. -And why not! He's the best friend a goose ever had.
