

MEN AND MACHINES

WEIST -- Aarseth

X Introducing the "Mighty Mite," which can do almost everything except fly. Hills -- no matter how steep -- are a cinch for this flyweight jeep.

X The rougher the going, the better "Mighty Mite" likes it. The Marine Corps is showing off the midget motor car for the first time and itz come hill or high water -- it churns along.

X Running on three wheels, itz Mighty Mite can spin on a dime.

X Bouncing over six-inch high hurdles, it can hit fifty miles an hour.

X Picked up ^{by} Marine helicopter, Mighty Mite can be carried into combat. Weighing only fifteen hundred pounds, it can be used as an ambulance.

X Last but not least, it can serve as a gun mount.

MEN AND MACHINES -- 2

And now from "Nifty Nite" to "Nifty Mouse" -- the Air Force's deadly rockets for aerial combat. A top-secret firing device on our speedy Sabre jets can launch twenty-four "Mickey Mouse" rockets at an electronically-located aerial target. One hit can knock down the biggest bomber. This is what happens when ~~the~~ "Nifty Mouse" hits home.

The pilot can fire sight unseen on enemy planes.

Tested here on obsolete planes on the ground, the firing device is making it hot for Red MIGs in the skies over Korea.
