

59-72.

THIS GUN CAN'T MISS.

Inventor Charles Stockholm has devised an electric gun to make a getaway pretty well impossible, when U.S. police chase motor bandits. The inventor showed how the gun has a 21-shot cartridge chamber, with firing mechanism in the hood. On a Texas disused airfield they held a demonstration. The idea is that the pursuing cop gives all his attention to driving. If he points his bonnet at the bandits' car, the gun is on the target and can't miss.

All the policeman has to do is press the trigger. What'll happen if bandits fit the gun on the back of their car?
