

BOMBER SETS DISTANCE MARK.

12,519 miles non-stop without refuelling. That was the astounding achievement of an American eight-engine bomber, demonstrating the possibility of very long range nuclear attack.

Starting at the island of Okinawa, off Japan, the bomber flew over Tokyo....then over Seattle to Fort Worth...northwards to Washington...over the Atlantic and the Azores...finally to a U.S. base near Madrid, more than 12,000 miles without refuelling.
