

MOTOR BOAT 1.

M.L.S. At Surfers Paradise a new powered surfboat is demonstrated. About fourteen feet long, the boat has a twenty-five horsepower engine.

IN WATER: Now for the big test. The powered boat goes into the surf and a conventional surfboat is put into the water to see how the two craft compare.

MOTOR: Right from the start it's a walkover for the new craft. It's well on its way out while the crew is still trying to man the surf-boat. An important advantage in speed when its a race to save life!

IN WAVES: Despite a fairly rough surf, the motor boat makes light work of the trip through the breakers, and leaves the surfboat further and further behind.

And how does she perform coming back in?

COMES BACK: Perfectly.

Motorised surf boats.....a new aid in lifesaving!
