

PATHE GAZETTE: 41/10. (DUBLIN)

BOMB DESTROYERS

It may look like an outside in house-maps, but its purpose is not quite so peaceful. It's a bomb shield or reflector, The idea being to reflect bombs from their targets by means of the cables fixed to the shields. The model shows how one of these protectors could protect the Panama Canal locks. The spinning cables would collect the missile and explode it before it could meet the target. The inventor shows how it would work with stones. Now bombs, small ones of course, but see how they explode when they strike the deflector.
