SIX GUN TANKS FROM U.S.A.

Brush up your Tank knowledge with some facts about the new American medium Cruiser known as the GENERAL LEE. These new 28-tonners are being used by a unit of a famous Canadian Regiment now training in Britain. Armed with a three inch field gun, an anti-tank gun and a battery of machine guns, the GENERAL LEE is a hard-hitting weapon. Its 400 horse power engine can drive it over and through the toughest obstacles. It seems to like really rough going.

A drive down a water course shows how the GENERAL LEE can travel down stream like a river boat.

With ice breaking away from their path, the cruisers take a plunge, with the water here and there sweeping over their tracks like the bow wave from a destroyer.

With a crew of seven men in each, the tanks wallow their way like ice-breakers in the Arctic. These are new and welcome contestants in the battle for supremacy in land warfare.
