

1352551-C

(5). TITLE.:- BIG BUSINESS.

Picture.:- The old country can't be in such a bad way, when gigantic works, such as these, are working full blast. This mighty plant is turning out motor-car bodies. Let's take a closer look at one --

--of the machines. Flat sheets of steel are inserted, every nine seconds, into the press. A pressure of --

1,000 tons is applied, and out come big sections --

--of motor-car bodies, in this case, wings.

Now we continue our overhead trip down the enormous workshop. Nowhere in the world can be found a more complete or efficient plant than this. To those who believe that Britain only "muddles through" most things, the magnitude of this plant must come as a surprise. And there's much more, going right away into the distance - an amazing sight !

All makes of cars get their bodies, panels, wings, and so forth, from this big works. It's a mighty industry, providing work for thousands of Britishers, directly and indirectly.

Here are some of the workers, happy that they are playing their part in Big British Business.
