

C-229751

(3). TITLE.:- ZEPPEL ON WHEELS.

Picture.:- The first official run of this "Zeppelin on wheels"
as --

--it is called, was made between Hamburg and --

--Berlin, when its speed averaged --

--120 miles per hour. Two miles per minute !

A revolution in rail locomotion. Useful for --

--getting there, but the countryside must look like one
long dirty smudge. The stream line build reminds one
of the late Sir Henry Segrave's "Silver Bullet". The
body is built of steel aluminium and is driven by a six
hundred --

--horse power aeroplane.

It accommodates 40 passengers.

On this trial, this amazing speed vehicle held
Dr. Krukenberg, the designer, his wife and four others,
and the insurance companies held their breath.
