

CAPTIVE AEROPLANE - Novel machine designed to
give would-be aviators air-mindedness.

-London-

Picture.

EFFECTS.

Learn to fly, but don't risk your neck while doing--

--so. That's the newest idea of this newest of all schools.
The plane responds to its controls. They're quite genuine,
and so is the engine noise. The machine will perform--

--all evolutions within the circle of a--

--few feet. Lots of people want to know they will learn
to be slick, or sick if they take up aeroplane joy-riding !

EFFECTS.

She's enjoyed it, anyway ! It's real wind too,
you'll notice !

The idea is to popularise light aeroplanes for every
day use. Well, on busy shopping--

--days, I shall retire to a nice, quiet, safe dug-out !
