

HURRICANE.

27/9/55.

Torrential rainstorms were a feature of the latest hurricane to hit the Atlantic seaboard. ~~For the third time~~ ^{THREE TIMES} this year, the coastal towns of North Carolina have been battered and wrecked by tempests --- and the third ~~time~~ ^{TIME} was the worst of all.

The shells of houses bear witness to the fury of the storm --- which at one time seemed to be on its way to New York. But it turned, and blew itself out ~~into~~ in the Atlantic shipping lanes!.... leaving behind it, inland seas that should have been dry land.

DREDGER.

In the Rhineland of Germany --- near the City of Cologne --- the world's biggest shovel dredger is in operation. The reason for its size is that this is a district where valuable lignite is ~~found~~ found; --- but it's found nearly a hundred and fifty feet below the surface. So the world's biggest digger --- digs down for the brown coal that at one time used to be found just underneath the ~~xxx~~ surface.

CANADIAN POWER PROJECT.

When they talk about moving house in the town of Iroquois in Canada --- they mean it literally. And they do it with a machine capable of lifting and hauling a load of two hundred tons. It's a community of eleven hundred people, who are getting out of the way of the new dam for the St Lawrence River Power Project. The engineers say that moving the houses is easy; but they really hit trouble when they try to shift grandma.

MODEL PLANES.

At Radlett Aerodrome, the All Britain Model Aircraft Rally... sponsored by the Model Aero Club of St Albans. It's open to the simplest and the grandest ---- from those powered by rubber, to the kind that recently made the first crossing of the English Channel. ~~Although~~ ^{EVERYBODY} Everybody knows that the Wright Brothers were the first men to fly an aeroplane --- ^{BUT} it's not so well-known that a model aeroplane made a successful flight, nearly a hundred years before them.
